To Whom It May Concern

The Metabolic Bone Disease Team, based at Sheffield Children's Hospital is a highly specialised and complex service working with children with Osteogenesis Imperfecta, otherwise known as Brittle Bone Disease.

We have been using the size 1, Zebra chair supplied by AKCES-Med for the past 18 months. This chair suits the needs of the children we treat as it is very adaptable and easy to use, facilitating development and enabling independence whilst at the same time providing good postural support. As some of our patients have short stature, the technical staff at AKCES-Med are very supportive in providing adaptations to the existing Zebra chair to suit the needs of these children. AKCES-Med also provide an excellent after sales support service.

We would therefore highly recommend the use of the Zebra chair supplied by AKCES-Med.

Yours faithfully

Liz Knowles
